

SharePoint on steroids.

Microsoft 365 is the foundation. SharePoint carries the structure. MetaShare turns it into real document management.

What MetaShare delivers.

A metadata layer on SharePoint Online. Every document carries its tags. Every workspace knows its rules.

No folder migration. No path archaeology.

Integration

MetaShare & FlexxStore Platform.

FlexxStore connects Dynamics 365 natively to SharePoint Online via Microsoft Graph. Every document arrives in MetaShare with full business context: customer, order, document type, date.

Microsoft 365, at full strength.

Document filing without media breaks. Search with context from Dynamics 365.
