

Barcode meets business context.

Anchor physical documents digitally. One scan, one match, one document.

Scan. Match. Archive.

FlexxStore prints barcodes or registers existing ones. The scan service recognizes the code and automatically assigns the document to the correct business case.

No manual assignment. No guessing.

Integration

MetaShare & FlexxStore Platform.

Archived scan documents land in MetaShare with the same ERP metadata as internal documents. Searchable via the same filters, in the same workspace.

Paper goes digital. Context stays.

From the scanner straight into business context.
