

# Metadata, not folder paths.

No document needs a path. Every document needs context. MetaShare thinks in tags.

# Tags, not paths.

Documents get tagged, not filed. Project, status, type, confidentiality – all as metadata. Every filter shows the right subset.

**Find without knowing the path.**

## Integration

# MetaShare & FlexxStore Platform.

FlexxStore delivers the ERP tag schema from Dynamics 365: customer, order, document type, date, project ID. Every document carries its business context as metadata into MetaShare.

# Find, don't search.

Fewer clicks. Fewer duplicates. More time for what matters.
