

Copilot needs metadata.

AI in Microsoft 365 is only as good as the structure it finds. Clean tags are the foundation.

Structure for AI.

Copilot analyzes content and connections. But only when documents are systematically tagged.

Metadata-driven content makes AI features usable.

Good metadata. Better answers.

Integration

MetaShare & FlexxStore Platform.

FlexxStore delivers structured ERP metadata from Dynamics 365 into every archived document. This is not an AI project – it is clean data work that makes you AI-ready.

Metadata today. AI tomorrow.

The foundation for intelligent search is already in place.
